Blueberries \$11	One Gallon Containers. At least two varieties should be planted together. Two year old plants.
Alice Blue	Fruit ripens early. Plants have vigorous and upright growth. Fruit has good color and size with a moderately dry stem scar. Climax is a suggested pollinator.
Brightwell	Ripens early to mid June - mid July. Vigorous/upright growth. Fruit is medium size, excellent flavor, dry stem scar. Most reliable variety for fruiting, making it an excellent choice for all planting applications. Pollinates with Powder Blue.
Climax	Early fruiting mid-June, upright growth. Firm w/excellent flavor, good color, small stem scar. Used for years in commercial, pick your own and home use. Pollinates well with Pink Lemonade and Brightwell.
Ochlockonee	(Patented Plant): 2002 release of the University of Georgia . Fruit ripens late June through mid August producing excellent yields. It has good berry color, firmness and a dry picking scar. Plant growth habit is very vigorous and upright. Suggested pollinators are Brightwell and Powderblue.
Powder Blue	Ripens mid-season. Upright, spreading growth, Fruit is medium in size with good firmness and flavor. Excellent for ornamental garden. Good choice for commercial planting. Suggested pollinators are Brightwell, and Tifblu.
Tifblue	Ripens mid to late season, upright growth. Medium size, good flavor, average stem scar. Home use. Tifblue is one of the oldest cultivars that is still being planted. It was released in 1955 by the University of Georgia. Pollinates well with Brightwell & Powderblue.
Muscadines \$11	One Gallon Containers. Two year old plants. Self Fertile.
Carlos	Bronze; Fruit are small to medium in size, ripen early to mid season, produce in clusters, ripens very evenly, is a very heavy producer, and has a dry stem scar. Very vigorous.
Lane	Large black muscadine, ripens early, excellent firmness and flavor which makes this a great variety for fresh market. Patent protected under PP# 24,142
Paulk	University of Georgia bred by Dr. Patrick Conner. Very large black/purple fruit , ripens mid-season. Vines are very productive with excellent yields. Has a dry stem scar. Patented ('Ga. 6-2-26' PPAF)
Ruby Crisp	University of Georgia release muscadine bred by Dr. Patrick Conner. A novel Dark red color berry. Ripens mid season. Berries have a firm flesh and crisp palatable skin. Vines are very productive with good yields. Uses: Pick your Own and home gardens. (Patented 'Ga. 8-1-338' PPAF)
Southland	Black; fruit are medium to large in size, good yields, very good flavor, and ripen mid to late season. Plant vigor is average and it has good disease resistance. Uses: Home, Commercial, Fresh Market, Juice and Jelly.
Tara	Bronze; fruit are large in size, good flavor, dry stem scar, and ripen early to mid season. Initially slow growing, becomes more vigorous after the first growing season, disease resistant, and cold hardy. Uses: Fresh Market, Pick Your Own, Home, and Commercial.
Triumph	Bronze; fruit are very large in size, good flavor, large clusters, good yields, dry stem scar, and ripen early. Plants have good vigor and disease resistance. Uses: Fresh Market, Pick Your Own, and Home Use.
Figs \$11	One Gallon Containers. Self Fertile. Two year old plants.
Brown Turkey	Fruits are medium to large in size, copper color skin, amber to pink color flesh, very good flavor, a closed eye and very few seeds. Plants are very prolific, many producing fruit twice a year. Uses: fresh eating, drying, canning and preserves.
Celeste	Fruit are small to medium in size, light brown to violet-brown skin, whitish pink color flesh, a closed eye, and very few seed. Plants produce in early summer , cold hardy through climate zone 6, and are self pollinating. Recommended for fresh eating, preserves, drying, and canning.
Magnolia	Large, pear-shaped fruit with reddish brown skin. Strawberry pink flesh. Tolerably rich and sweet. Grown as a preserving fig. Very hardy tree. Good for short summer areas.
Blackberries \$11	One Gallon Containers. Blackberries are thornless. Self Pollinating. Two year old plants.
Arapaho	(US Plant Patent 8510) Fruit are medium in size, good flavor. Fruit ripen early over about a four week period with good yields.

Kiowa	(US Plant Patent 9861) Fruit are the largest of any other variety, good flavor. Fruit ripen mid season over a six week period with good yields.
Ouachita	(US Plant Patent #17162) Fruit are large in size, very good flavor. Fruit ripen mid season over about five weeks with consistently high yields. Ouachita is potentially the best variety for storage and handling.
Prime Ark Traveler	Glossy and firm fruit with high-quality flavor. Vigorous, upright growth habit that makes berries easy to pick. Best for eating fresh, using in recipes, and offering at farmers' markets. Continues to fruit until frost. Everbearing primocane. Early season. Self-pollinating.
Snowbank	The Snowbank "White" Blackberry is a medium-sized bush that reaches a mature height and width of around 4-6 feet. It produces large, juicy, and flavorful WHITE berries, making it an excellent alternative to traditional blackberries. It also adds beauty to your landscape with its clusters of white flowers in spring and its multicolored foliage in the fall.
Sweet Ark Ponca	A heavy producing plant, erect with excellent disease resistance. Fruit appears early in the season and is great for fresh eating and local farm markets.
Persimmon \$11	One Gallon Containers. Plant two or more trees for better pollination and maximum yields. Two year old plants
Americian	Round 1-2" yellowish orange fruit that is edible after a good frost. Trees can reach 40-60' tall and live 30-80 years. Plant two or more trees for better pollination and maximum yields. Great tree to plant for wildlife.
Apple Trees \$32	Five Gallon Containers- Two varieties needed to ensure cross pollination. Two year old plants.
Arkansas Black	Fruit are medium in size with very dark red skin, yellow flesh, crisp, juicy, very firm, yellow flesh, and ripens late October or November. Tree has large, vigorous growth habits. Used for fresh eating and cooking. Recommended pollinator is Yellow Delicious
Callaway Crabapple	Fruit are red, small sized, and crisp. Yellow flesh is mildly tart. Great for fresh eating and jelly. Originated in Callaway Gardens in Georgia. Self-fruiting
Gala	Fruit are medium to large in size, golden skin with red striping, white flesh, crisp, good flavor, and ripens mid-season. Tree growth habit is vigorous and upright.
Jona Gold	Fruit are large with striped red over bright yellow, firm and crisp, juicy with a slight tart flesh. Great dessert and fresh eating apple. Vigorous sturdy tree that bears annually. Pollinate with Gala or Crabapple..
Yellow Delicious	Large tapered fruit with golden yellow skin sometimes with a reddish rose blush. Crisp aromatic white flesh. Sweet flavor. Very vigorous tree bears at young age and heavily. Self-fruitful but yields are improved when pollinated by Red Delicious. Excellent pollinator for other apples. Good disease resistant.
Pear Tree \$32	Five Gallon Containers- Two varieties needed to ensure cross pollination. Two year old trees.
Bartlett	Fruit are large in size, yellowish brown in color, white flesh, very sweet, juicy, and ripen mid-season. Trees are medium in size with upright growth. They are ideal for planting in smaller areas.
Kieffer	Fruit large in size, golden yellow in color, white flesh, crunchy, sweet, and ripen mid-season. Trees have vigorous growth, are very hardy, blight resistant, and prolific. Self-fruitful.
Moonglow	Fruit are medium in size, yellow in color, white flesh, soft, excellent and ripen early. Mild Flavor with almost no grit cells., excellent for fresh use or canning. Trees have an upright growth and are blight resistant.
Orient	Fruit are large in size, yellow with reddish tint color, white flesh, ripens early to mid-season. Fruit is known for its intense beauty. Great for canning. Trees are large with vigorous growth habits and blight resistant. Requires pollinator; recommend using Kieffer or Moonglow.
Peach \$32	Five Gallon Containers- Self Pollinating, cross pollination does help with fruit size. Two year old trees.
Belle of Georgia	Fruit are large in size, skin has a light color with a red cheek, excellent flavor, freestone, ripens mid to late season. Trees are hardy, growth is vigorous, disease resistant and self fertile.

Elberta	Fruit are large in size, yellow with a red blush, yellow flesh, very juicy, good flavor, freestone, ripens late. Trees grow vigorous and compact and self fertile. Elberta is by far the most well known peach in the U.S. It is great for home and commercial use.
Harvester	Harvester peach trees are heavy producers of large, red and yellow blush skinned fruit. The fruit has a yellow flesh and is freestone. Blooms are pink and white in early spring and harvest is July-August.
O' Henry	O'Henry peach trees produce large, yellow, freestone peaches, popular for their excellent flavor. They are vigorous, heavy-bearing fruit trees and are considered an excellent choice for the home orchard. Tree height can be as tall as 30 feet with a width of 15 feet. The fruit is firm and the yellow flesh is streaked with red and has a superb flavor.
Plum \$32	Five Gallon Containers- Two varieties needed to ensure cross pollination. Two year old trees.
Bruce	Hardy trees perfect for your backyard. They are a Chickasaw x Japanese Cross that produce sweet and juicy plums. In late spring, white flowers emerge and mature into dark red fruits. With loads of late spring blooms, there is no chance of losing them due to a late spring frost. They are an early season plum, so you can expect to begin picking in June. The tree will reach a mature height of 12-15 feet.
Byron Gold	Perfect for the South. Large, bright, yellow fruit is over 2 inches in diameter with a golden-yellow flesh that's deliciously crispy. Produces white blooms in early spring and will yield its yellow fruit in late June to early July. Mature tree height is 12-15 feet.
Methley	Fruit are medium to large in size, reddish purple in color, sweet juicy flesh, and ripen early. Trees have upright growth habit, and well adapted in most soils and are good pollinators.
Pecan Trees \$52	Five Gallon Containers- Two year old trees. *Important Pollinator Info* be sure to choose two compatible trees if you do not have any other pecans in your yard or close to your property.
Avalon	Avalon was released by the University of Georgia in 2000. It produces high yields of large nuts with a very good quality. They mature in early October. It has superior resistance to pecan scab making it a great choice for planting in the Southeast. Requires a Type I pollinator. Suggestions: Caddo, Creek, and Pawnee.
Cape Fear	The 'Cape Fear' pecan tree is a popular, vigorous cultivar from North Carolina, known for producing high-quality, golden kernels early in its life and offering good scab resistance, making it ideal for the Southeast. It's a large, shade-producing tree, requiring a Type 2 pollinator like 'Stuart' or 'Elliott' for best yields, though mature trees can develop alternate bearing and susceptibility to bacterial leaf scorch, requiring crop management. Pollinator Suggestions: Cherryle.
Cherryle	Cherryle Pecans have a large nut size with a thin shell. Yield is around 30lbs per year. It has moderate scab resistance and harvest is in early October. Suggested Pollinators are: Desirable, Oconee, Pawnee, and Cape Fear.
Creek	Creek pecans have a medium nut size and can begin producing at a young age. It has moderate scab resistance and is touted as a low maintenance variety. Harvest is in early October. Pollinator Suggestions: Oconee, Caddo, Pawnee.
Lakota	Lakota is a USDA cultivar released in 2007. It was selected for its high nut quality, high yield potential, early nut maturity, and excellent tree strength. Nuts mature very early, usually by the end of September. It is very precocious, has outstanding scab resistance and is highly productive, making it an excellent selection for the backyard. Suggested pollinators: Caddo, Desirable, Pawnee, or Oconee.
Pawnee	Large nut with soft shell. Excellent quality, good fields, ripens early and bears nuts at a young age. Trees are disease resistant and are good for high density planting. Pollinates well with Elliott, Cherryle.
Zinner	'Zinner' Pecan is very vigorous and is a popular cultivar for its overall nut quality. Great year-to-year production consistency with yields being higher than 'Desirable' and similar to 'Stuart'. Cluster size of Zinner is 2.5, which accounts for the consistency and high yields. Tree growth is upright and strong with very little limb breakage. Zinner is a great choice for quality nuts with great flavor. Suggested Pollinators: Cape Fear, Desirable, Creek, Zinner.
